

## Senior Operations Engineering & Technology Opportunities in the Dynamic Pacific Northwest

Sound Transit (ST), which carries over 43 million passengers a year in the Seattle-Tacoma counties of King, Pierce and Snohomish on its “Link” light rail, “Sounder” commuter rail, and “ST Express” bus services, is looking to recruit specialized engineering talent to help it address extraordinary system expansion and regional growth.

In 2016, Seattle was named the fastest-growing major U.S. city for the third year in a row, with a 3.1% annual growth rate. ST’s 25-year strategic plans, made possible by a series of voter approved ballot measures, continue to meet that growth by improving existing services and expanding the system’s reach.

As part of that effort, ST is standing up a new *Operations Engineering and Technology Division* to better manage all its operational technology platforms. The new Division will design, maintain, integrate, coordinate and manage its SCADA, Passenger Information, Security, PTC, Data Center and Radio technologies to help achieve that goal.

Accordingly, ST is recruiting for two systems engineering management positions:

- [Director of Operations Engineering and Technology](#)
- [Deputy Director of Operations Technology](#)

For further information about these opportunities, contact Christopher Boylan, Director, Transportation & Infrastructure Practice, Harris Rand Lusk Executive Search at [cboylan@harrisrand.com](mailto:cboylan@harrisrand.com)

Sound Transit is an Equal Opportunity Employer and offers competitive salaries and benefits.
